

# Cost Cutting Idea for Wastewater Collection Systems

Monitoring remote pumping stations with traditional alarm dialers and frequent operator site visits is costly and inefficient. Without accurate and reliable information, it is impossible to effectively manage multiple stations.

**Traditional phone dialers** provide alarms only. This requires frequent site visits by operations personnel to collect operational information.

**SCADA** is an expensive solution for municipalities that do not need the advanced features offered. SCADA is expensive to install; it requires skilled programmers to maintain; it uses restrictive software; and it becomes obsolete and unsupported very quickly.

**OmniSite** cloud-based cellular monitoring systems saves thousands of dollars by giving managers and operators valuable operating data in addition to providing alarm notifications. They are specifically designed for pump station monitoring with a low initial cost and lower monthly fees. Other benefits include:

## Prevents Equipment Failures

**OmniSite** dialers provide managers and operators with critical data to proactively schedule maintenance, allocate resources, and better respond to alarms. They allow operators to address pump and control problems faster and more efficiently. The effective use of alarm history and operating data empowers operators to better understand their pumping stations and ensure a more resilient system.

## Reduces Site Visits

**OmniSite** automatically records and stores operational data, reducing the need for on-site visits, increasing efficiency and saving time and money.

## Lowers Monthly Fees

The monthly cost for **OmniSite** service is \$21.00 per month which is much lower than phone lines.

## Smart Phone App

The **OmniSite** GuardDog smart phone app provides the necessary data to allow operators to quickly detect problems before they become a major maintenance headache.

## Low Cost Installation

The **OmniSite** units are easy to install. Envirep provides professional installation services at an affordable price. Or, we will train your crew to install the equipment themselves.

## Risk-Free 60-Day Trial

**OmniSite** and Envirep offer risk-free field trials, factory training, and top-notch technical support. Envirep will not only provide the equipment for a risk-free trial, we will also install it risk-free.

**OmniSite** cloud-based monitoring systems are the most effective way to monitor pumping stations.

**Envirep has a proven track record with over 1,000 successful installations. We provide top-shelf equipment to meet your specific needs, complete with installation services, comprehensive training and support.**
