Your Old Alarm Dialers with OmniSite Cellular Monitoring

OmniSite alarm dialers are the future of remote monitoring using cellular telemetry to transmit alarms and pump station operational data.

The **OmniSite device** also records flow readings, pump run times, and cycles per day.

ADVANTAGES

- Low initial cost
- Low operating costs
- Reduces manpower requirements for pump station inspection
- Inherent lightning protection due to no telephone line
- Alarm data is distributed via telephone, email or text
- Easy to install, setup, and program
- Historical alarm data is available via a website
- Provides pump performance data and flow data
- Smart phone app (iPhone and Android) allows quick status check of equipment
- Easy to change callout list on website
