

EXECUTIVE SUMMARY

Gorman-Rupp is pleased to announce our 2" Super T Series® pump models that come standard with an Eradicator® style self-cleaning wearplate*.

The rotating assembly is interchangeable with 2" T Series® Classic models and the overall pump footprint remains the same. Common parts between the 2" T Series Classic and the 2" Super T Series include: impeller, impeller shaft, seal assembly, outboard and inboard bearings, seal plate and wearplate. Non-interchangeable parts include: volute casing and back coverplate assemblies.

All 2" Super T Series pumps maintain their externally removable suction flap valve allowing inspection without the inconvenience of disconnecting piping or draining the pump casing. The rotating assembly includes dual site gauges for inspecting oil condition and levels in the bearing and seal cavities.

THE INSPECTION COVER
ALLOWS FOR EASY IMPELLER
ACCESS AND ROUTINE
MAINTENANCE. THE DESIGN
GREATLY REDUCES CLOGGING
AND MAXIMIZES UPTIME.

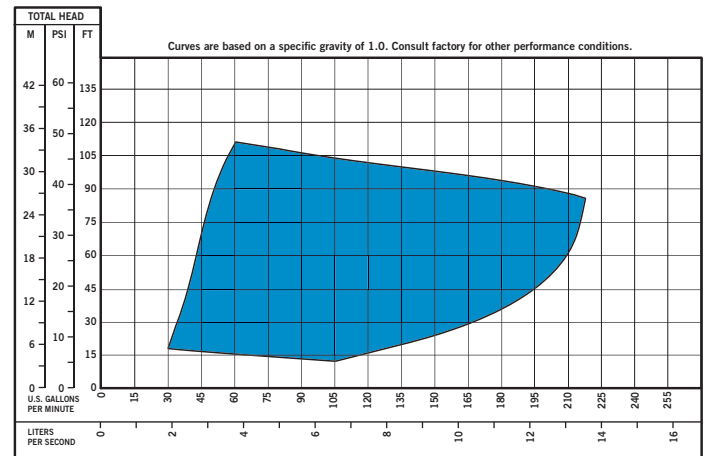

*Wearplate does not include lacerating tooth.

FEATURES

- The external, shimless and indexable impeller to wearplate clearance adjustment is secured by the patented Gorman-Rupp locking collar design.
- The back cover assembly with four-point attachment and additional o-ring provide a better seal between the vacuum and pressure chambers.
- Back coverplate with pusher bolt holes and an easy grip handle allow for easy removal. All models include an obstruction free flow path with a two-point "webbed" plate design for increased durability, reduced clogging and increased operational efficiency.
- The system includes a patented, lightweight inspection cover and a notched/grooved aggressive self-cleaning wearplate .
- All models come standard with Super T Series 5-year warranty.
